Milestone Questions

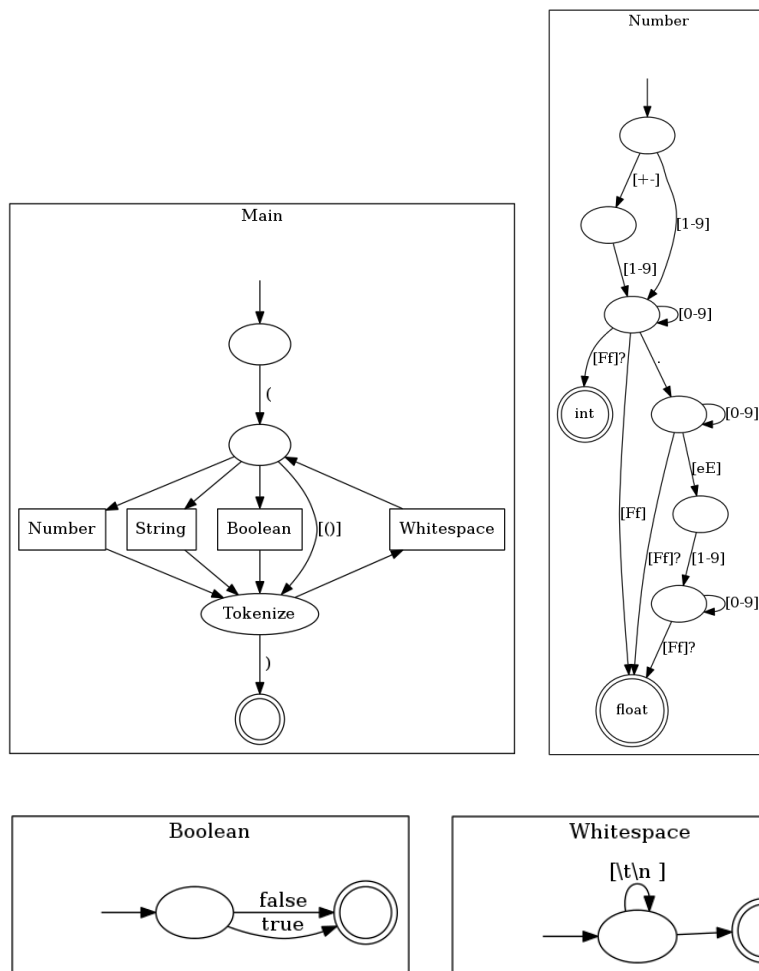

Specification

This milestone is to teach us how to make a lexer, and so that we form a formal specification of our language.

Processing

We designed a lexer and language together, by meeting together and drawing flow charts and grammars on a whiteboard.

Testing

We tested the code by giving it sample bits of program at every step of the design process, to test for validity, as well as giving it bad input to see how it reacted.

Retrospective

I learned about parsing strings into tokens, and how to do real programming in ruby. I also learned about working with my group members, and what the Symbol Table is for.
